Remove uploaded Skinmaps from the app

1. Open Transfers and check uploaded scans

Free up device storage: Use this workflow to remove uploaded Skinmaps from this device. They **stay in the cloud**. Check upload status before removing local copies.

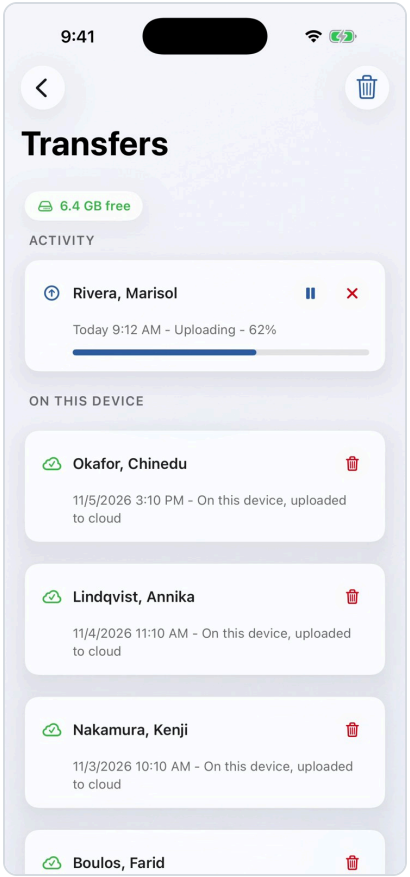

1 Open Transfers

From the Skinmap home screen, tap **Transfers** under Patients & Scans.

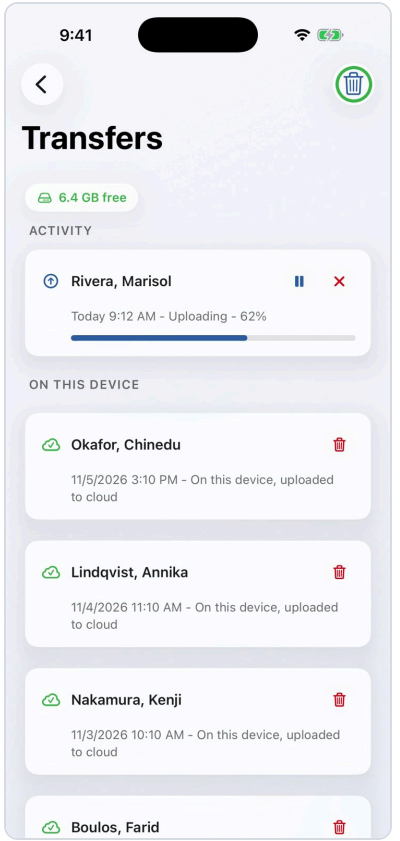

2 Check upload status

Under **On this device**, look for the green cloud check and **uploaded to cloud** status.

3 Open bulk removal

Tap the **trash icon at the top right**. The red X in Activity cancels an upload or download; it is not the removal control.

Remove uploaded Skinmaps from the app

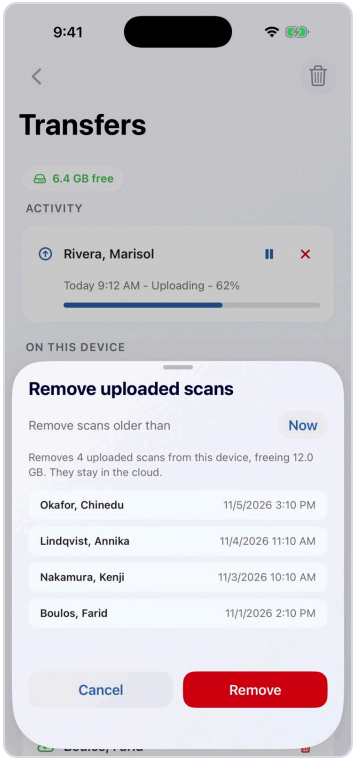

2. Choose a removal option, then confirm

SKINMAP™ TOTAL BODY PHOTOGRAPHY

Choose either option A or B below: Review the listed Skinmaps, scan count and space to be freed before tapping **Remove**. Choose **Now** or a days-old cutoff for this removal.

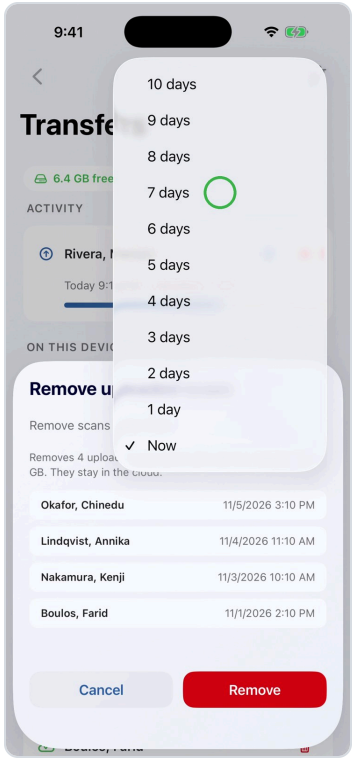

4A Default: keep Now selected

Leave **Remove scans older than** set to **Now** to remove the uploaded scans listed. Tap **Remove**.

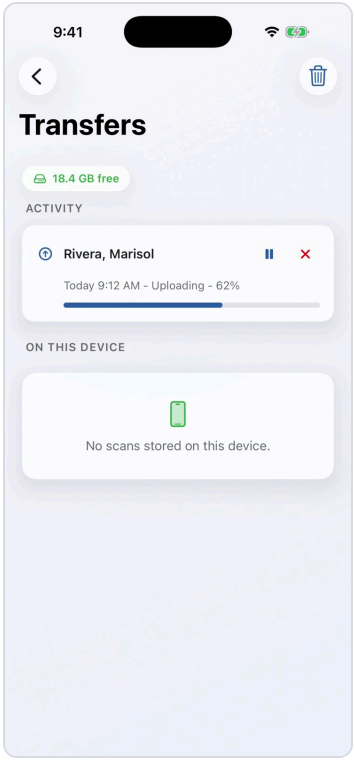

4B Or: choose a days-old cutoff

Tap **Now** and choose the number of days, such as **7 days**. Review the resulting list, then tap **Remove**.

5 Verify space was freed

Return to **Transfers**. Check free storage and the remaining scans. If all were removed, the device list is empty.
